Assessment on Zhalong Wetland value

CUI Li-juan (Institute of Forestry, Chinese Academy of Forestry Science, Beijing 100091, China)

Zhalong Wetland is located in the lower reaches of the Wuyuer River to the west of Songnen Plain, Heilongjiang Province. Wetland values of Zhalong contains direct use values (products and service from wetland), indirect use values (environmental values), and current non-use values. Use values of Zhalong Wetland include direct use and indirect use values. The selected valuation objections cover main plants and animals in Zhalong, and apply direct market value method to evaluate. Tourism value was gained by TCM method. The value of C fixing was calculated by tax rate of Sweden. Re-searching value, waste disposing value and habitat value were gained by Robert Constanza method. Non-use value of wetland are not competitive, it is to say that when valuing non-use values, market doesn't work. In order to reserve natural resources, the price of wetland values must be marked. Price is the reflection of objective things through one's mind, so only Willingness To Pay (WTP) can reflect the true price of wetland values.

【Key Words】 : **Zhalong Wetland value assessment**

【CateGory Index】 : F301
