Evaluation of the Chinese Fir Forest Ecosystem Services Value

Wang Bing Ma Xiangqian Guo Hao Wang Yan Leng Ling(Key Laboratory of Forest Ecological Environment of State Forestry AdministrationResearch Institute of Forest Ecology,Environment and Protection,CAF Beijing 100090)

The forest ecosystem services evaluation is one of the hot spots on forest ecosystem research. We assessed the quantity value and the economic value of Chinese Fir (Cunninghamia lanceolata) forest ecosystem services on the basis of the long-term observation of several ecosystem research stations which belonged to the Chinese forest ecosystem research network (CFERN), the data of forest resource in China and the data of social commonality. The research was carried out in three aspects (provide air and oxygen, carbon fixed and oxygen released, biodiversity conservation and soil conservation, mental purification). The results showed that the total economic value of Chinese Fir forest ecosystem services in 1994—1998 and 1999—2003 respectively are 15 643.82 yuan·hm-2·a-1 and 17 043.86 yuan·hm-2·a-1, the unit area quantity value respectively are 12.62×104 yuan·hm-2·a-1 and 12.34×104 yuan·hm-2·a-1. The sequence of the six services which we assessed is water supply storage, carbon fixed and oxygen released, biodiversity conservation, atmosphere environment mental purification and soil conservation.
